Lab Report

Department of Information and Communication Technology

Report No: 03

Report Name: TCP and router queues.

Course Title: Wireless and Mobile Communication Lab

Course Code: ICT-4202

Submitted By	Submitted To
Name: Nilanjana Basak ID: IT-16006 Session: 2015-16 4th Year 2nd Semester Dept. of Information & Communication Technology, MBSTU.	Nazrul Islam Assistant Professor Dept. of Information & Communication Technology, MBSTU.

Submission Date: 11-09-2020

Experiment N0: 03

Name of Experiments: TCP and Router Queues.

Objective:

- For TCP and router queues, create a simple dumbbell topology with two client node1, node 2 on the left side and node3 and node4 in the right side.
- Let Node5 and Node6 form the bridge of the dumbbell. Use point to point links.
- Add drop tail queues of size QueueSize5 and QueueSize6 to Node5 and Node5 and Node6.
- Install a TCP socket instance on Node1 that will connect to Node3
- Install a TCP socket instance on Node2 that will connect to Node3
- Also Install a TCP socket instance on Node2 that will connect to Node4.
- Install a UDP socket instance on Node2 that will connect to Node4.
- Start Node1--Node3 flow at time 1s, then measure it's throughput.
- Start Node2--Node3 and Node2--Node4 flows at time 15s, measure their throughput.
- Measure packet loss and cwnd size, and plot graphs throughput/time, cwnd/time and packet loss/time for each of the flows.
- Use the ns-3 tracing mechanism to record changes in congestion window size of the TCP instance over time.
- Mark points of fast recovery and slow start in the graphs.
- Perform the above experiment for TCP variants Tahoe, Reno and New Reno, all of which are available with ns-3.

Source Code:

```
// This example serves as a benchmark for all the queue discs (with BQL enabled or not)
```

```
//
```

```
// Network topology
```

```
//
```

```
//          192.168.1.0          192.168.2.0
```

```

// n1 ----- n2 ----- n3
// point-to-point (access link)          point-to-point (bottleneck link)
// 100 Mbps, 0.1 ms                      bandwidth [10 Mbps], delay [5 ms]
// qdiscs PfifoFast with capacity        qdiscs queueDiscType in {PfifoFast, ARED,
CoDel, FqCoDel, PIE} [PfifoFast]
// of 1000 packets                      with capacity of queueDiscSize packets [1000]
// netdevices queues with size of 100 packets netdevices queues with size of
netdevicesQueueSize packets [100]
// without BQL                          bql BQL [false]
// *** fixed configuration ***
//
// Two TCP flows are generated: one from n1 to n3 and the other from n3 to n1.
// Additionally, n1 pings n3, so that the RTT can be measured.
//
// The output will consist of a number of ping Rtt such as:
//
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=111 ms
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=111 ms
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=110 ms
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=111 ms
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=111 ms
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=112 ms
// /NodeList/0/ApplicationList/2/$ns3::V4Ping/Rtt=111 ms
//
// The files output will consist of a trace file with bytes in queue and of a trace file for
limits

```

```
// (when BQL is enabled) both for bottleneck NetDevice on n2, two files with upload and download
```

```
// goodput for flows configuration and a file with flow monitor stats.
```

```
//
```

```
// If you use an AQM as queue disc on the bottleneck netdevices, you can observe that the ping Rtt
```

```
// decrease. A further decrease can be observed when you enable BQL.

Conclusion:

Creating dumbbell topology, the process of installing TCP & UDP instance are learnt by this lab. The specific characteristics of TCP and Router queues include the manner in which they avoid routing loops, the manner in which they select preferred routes, using information. Ns-3 tracing mechanism are used to record changes in congestion window size of the TCP instance over time. & used gnuplot/matplotlib to visualise plots of cwnd vs time. TCP and router is related to connecting the network packages simultaneously.
